WISPECO EXTRUSION DESIGN

The extruded sections shown in this catalogue are in general demand and available to any customer. Thousands of other profiles have been designed for customers and specifiers to suit specific purposes.

Wispeco will be pleased to assist you with the design of aluminiu extrusions to suit your specific requirements.

FINISHING OF ALUMINIUM EXTRUSIONS

Wispeco Aluminium is able to offer a variety of finishes for aluminium extrusions which includes anodising and powder coating.

ALUMINIUM ALLOYS

DESIGNATION	Description	Finishing	Available Forms				Typical Uses
		Anodising Response	Shapes	Tubing	Bars	Rods	
1350	Electrically pure aluminium with conductivity of 60% of I.A.C.S.	-	All	✓	FLAT		Busbar. All electrical conductor requirements.
6063	Sustainable for intricate sections of medium strength. forms well in "F" and "T1" conditions. High Corrosion resistance. Good surface finish.	Very Good	All	✓		✓	Architectural members such as window frames and shop-fitting shapes. Irrigation tube. General Purpose Use.
6463	A modified 6063. Responds well to chemical brightening.	Very Good	All	✓		✓	Bright trim. Extruded reflector shapes.
6101	The best combination of electrical and mechanical conductor properties. Conductivity 55% of I.A.C.S.	-	Structural	✓	✓	✓	Busbar. Electrical conductors and fittings.
6261	General purpose structural alloy. Good mechanical properties. Good corrosion resistance and weldability.	Good	Structural	✓	✓	✓	Structural applications of all kinds. Road and rail transport. Mine cages, cranes, bridges, towers, roof trusses, etc. Bolts, nuts, drive screws, etc.
6082	General purpose structural alloy. Good mechanical properties. Good corrosion resistance and weldability.	Good	Structural	✓	✓	✓	
6005	Medium strength alloy.	Fair	Limited	✓	✓	✓	Ladders, Design applications requiring characteristics between 6063 and 6082.

TEMPER DESIGNATIONS

DESIGNATION	Approximate Equivalent	Description
F	M M	As fabricated. Applies to the product of shaping process in which no special control over thermal conditions or strian-hardening is employed
T1	TB W	Cooled from an elevated temperature shaping process and naturally aged to substantially stable condition
T5	TE P	Cooled from an elevated temperature shaping process and then artifically aged
T6	TF WP	Solution heat-treated and then artifically aged

NOTE: 1350 is a non-heat treatablealloy and is always supplied in the "F" Condition.
